

Deploying Static Websites with a Magic Button

Abhinav Bisht

Manual deployments
waste time

They can lead to stress
and frustration.

S3 policies can be
confusing

Missing just one policy
can cause issues.

Downtime detection is
tricky

How do you know if your
site's down?

The Challenges of Manual Deployments

Why automating your deployment process is essential
for peace of mind.

Mastering Static Site Deployments with One Command

Automate your website deployment from GitHub to S3 with ease and confidence.

Automated Deployments

Deploy static sites effortlessly from GitHub to S3, saving time and reducing manual errors in your workflow.

Instant Monitoring

Receive immediate notifications via email if something breaks, ensuring your site stays up and running without surprises.

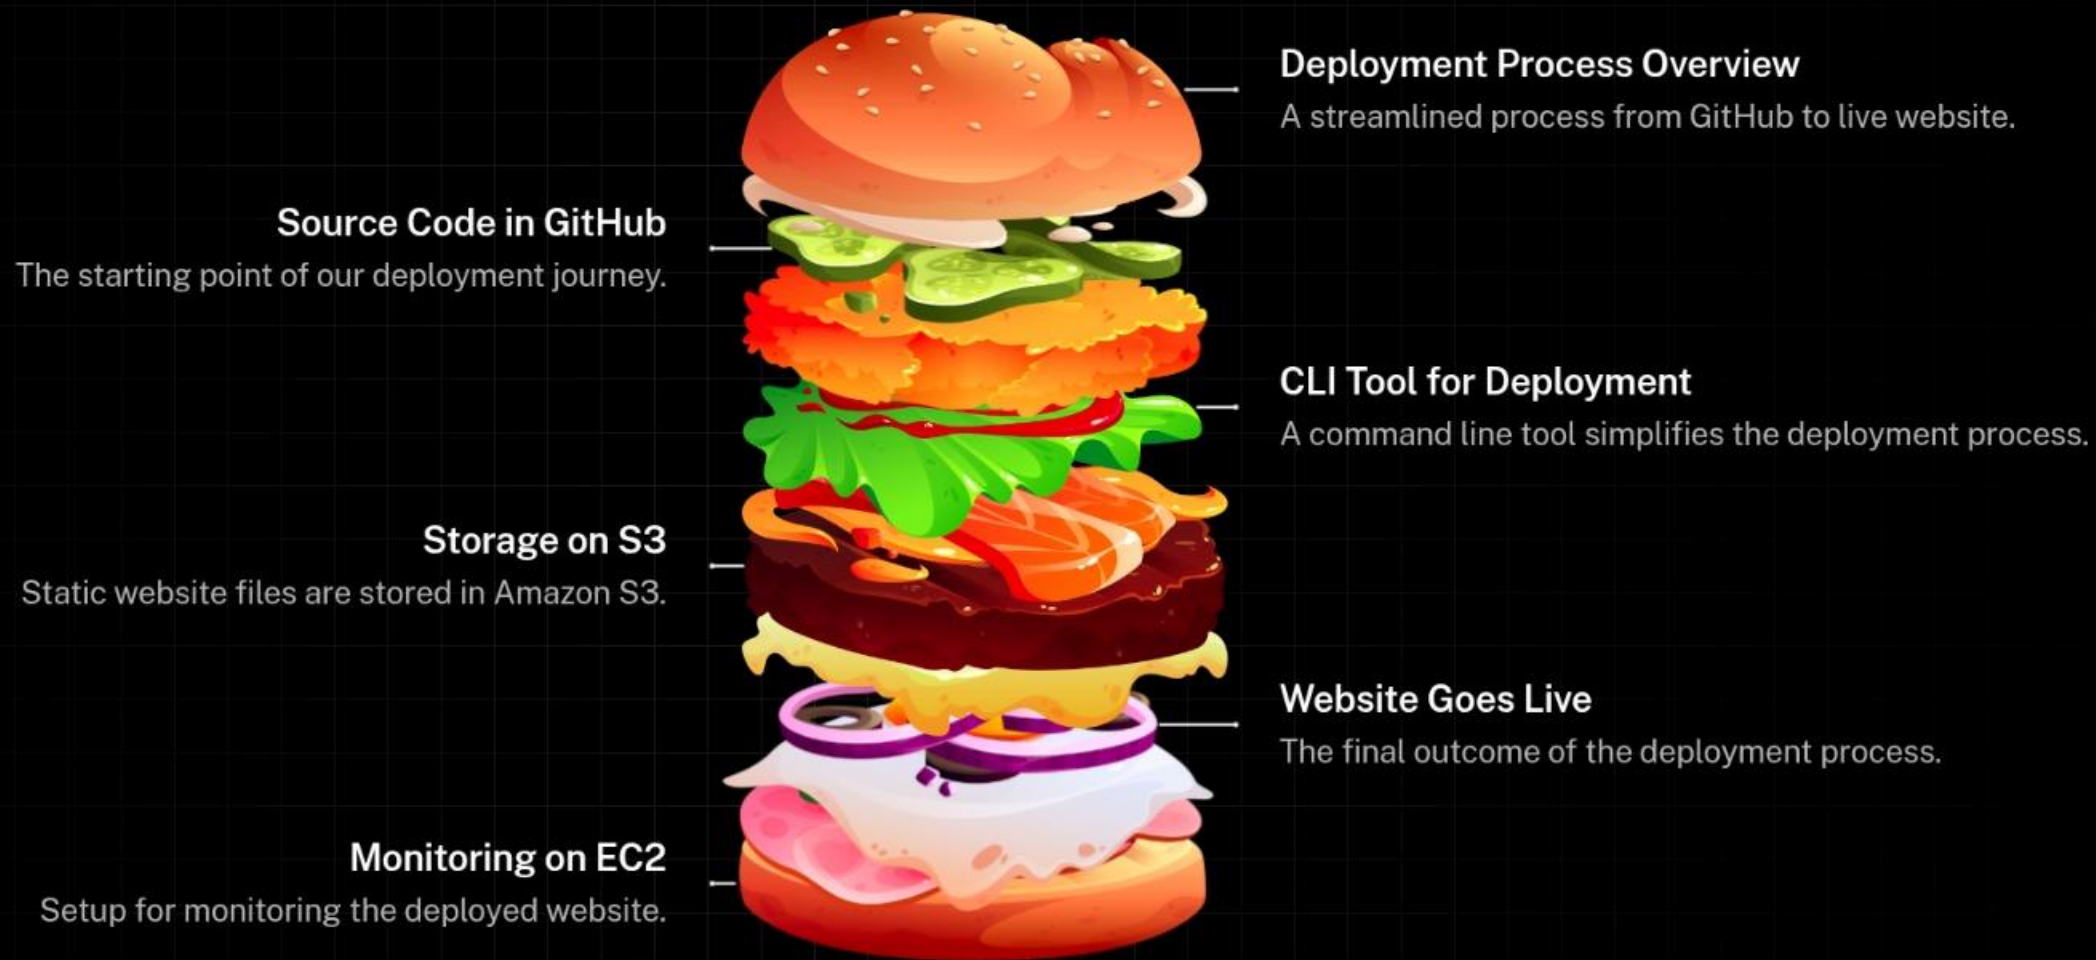

Easy Rollbacks

Implement quick rollbacks and configure settings easily, allowing you to recover from issues without hassle.

Configuration Simplicity

Manage configurations with ease, making adjustments simple and intuitive, so you can focus on what matters most.

Solution in a Nutshell

CLI Command Showcase (“DevOps as Easy as Pie”)

Python command for initializing the deployment tool with GitHub URL.

Command to deploy the application in the development environment.

Initialize monitoring setup for the deployment.

Check the status of the deployment.

Monitoring & Alerts – Your Friendly Tech Guardian

Stay informed with custom dashboards, instant alerts,
and more

Custom dashboards at your fingertips.

Craft a **full custom dashboard** that fits your needs out of the box,
providing a unique view of your data and metrics.

Instant health checks and insights.

Get a quick **status at a glance** with health checks and response times,
ensuring you're always on top of your game.

Effortless Rollbacks: Your Website's Safety Net

Experience instant rollbacks just like your favorite keyboard shortcut for the web with our new deployment tool.

Easy Rollbacks

With our deployment tool, rollbacks are now just as simple as deploys. If something goes wrong, you can quickly revert to the previous version without a hassle.

No More Oops Moments

Our system is designed to handle mistakes gracefully. If you encounter an issue, simply hit that rollback button and say, 'Oops? No problem.'

Code Level-up – “Bonus: Modularization”
